PROFESSIONAL SUMMARY

A Computer Science undergraduate and founder of NexSolve, I develop AI-driven and automation-first systems that are actively utilized, beyond mere prototypes. I engage with the full stack, covering backend logic, frontend interfaces, and AI tooling integration, acquiring knowledge through hands-on problem-solving. Additionally, my experience leading teams and managing my own agency has deepened my understanding of ownership and execution, complementing my technical skills. While early in my career, I prioritize being the builder over merely discussing ideas.

WORK EXPERIENCE

Founder Sep 2025 - Present
NexSolve Pune

- Established NexSolve as a comprehensive software and AI-automation studio, managing the entire client lifecycle from discovery and requirements scoping to solution architecture, delivery, and post-launch support.
- Delivered a custom business operations platform for SkyLeaps Industries Pvt Ltd, transforming manual workflows into a production-ready system developed from the ground up.
- Spearheaded client acquisition, proposals, pricing, and delivery timelines, evolving NexSolve into a self-sustained venture by integrating hands-on engineering with business development.

Java Full Stack Developer | Internship May 2026 - Jun 2026
Friends Union for Energising Lives On-site • Pune

- Developed MediQ, a comprehensive medical store inventory management system, by independently creating both frontend and backend components. Achieved full end-to-end deployment, encompassing stock tracking, billing, and expiry management.
- Tested and debugged core application workflows against real-world pharmacy scenarios, refining stock and billing logic to reduce errors before final deployment.

Technologies / Skills Used : Java, Spring Boot, React, SQL

SAP ABAP Backed Developer | Internship Nov 2025 - Apr 2026
Edunet Foundation Remote

- Developed and tested Behavior Definitions using SAP's RESTful ABAP Programming Model (RAP) and CDS Views on S/4HANA Cloud, adhering to Clean Core principles, validated through successful sandbox testing.
- Exposed and consumed OData V2 and V4 services via ABAP Development Tools, integrating SAP backend objects with consuming applications through comprehensive end-to-end service connections.

Technologies / Skills Used : SAP Fundamentals, Advanced Business Application Programming (ABAP)

EDUCATION

Padmabhooshan Vasantdada Patil Institute Of Technology | Pune Aug 2023 - Jun 2027
Bachelor Of Engineering CGPA : 7.1

PROJECTS

MandirGo | 🌐 Website 🐙 Github

- Built a real-time crowd intelligence system using YOLOv8 and OpenCV on live CCTV feeds, giving temple administrations continuous occupancy and congestion visibility to make faster, safety-critical decisions during high-footfall events.
- Developed a Machine Learning footfall-prediction engine with Scikit-learn that achieves 97% prediction accuracy on historical visitor trends, powering smart darshan booking and proactive crowd planning for peak pilgrimage periods.

Technologies / Tools Used : Python, OpenCV, Scikit-learn, YOLOv8, React

PROJECTS

BloodSync | Github

- Built an end-to-end web scraping and data automation pipeline with Node.js and Playwright, extracting structured, real-time blood inventory data from the eRaktKosh healthcare portal with multi-page pagination handling and zero manual intervention.
- Integrated Google Sheets API with OAuth 2.0 authentication and deployed the pipeline as a scheduled, unattended automation workflow, delivering continuously synchronized healthcare data in collaboration with Love Care Share Foundation.

Technologies / Tools Used : Node.js, Playwright, JavaScript, Google Sheets API, OAuth 2.0

intelliSOC | Github

- Built an AI-assisted threat investigation platform simulating real-world SOC analyst workflows across credential compromise, phishing, malware beaconing, and insider-threat scenarios using realistic security datasets.
- Architected a FastAPI backend with modular REST APIs and a React (Vite) frontend, delivering an interactive investigation dashboard that structures threat analysis and reduces manual correlation effort for analysts.

Technologies / Tools Used : Python, FastAPI, React(Vite), REST API, JSON, AI-Assisted Investigation Workflows

Jarvis | Github

- Architected a modular multi-agent AI system spanning 600+ orchestration nodes, capable of autonomous planning, NLP-driven code generation, and continuous live operation with self-validation.
- Implemented RAG pipelines with FAISS and ChromaDB for persistent agent memory, alongside self-modifying code pipelines with multi-layer validation, full audit logging, and rollback at every decision boundary.

Technologies / Tools Used : Python, PyTorch, LangChain, LangGraph, Gemini API, OpenAI API, RAG, NLP

SKILLS

Programming Languages :	Python, TypeScript, Java, SQL, JavaScript
AI/ML :	PyTorch, RAG, NLP, LLM Integration, YOLOv8, OpenCV, Scikit-learn
Backend & Cloud :	Spring Boot, Flask, Node.js, FastAPI, Supabase, n8n
Soft Skills :	Leadership, Management, Public Speaking
Tools Platforms :	Linux, Git, GitHub, Postman, VS Code, Docker

AWARDS & ACHIEVEMENTS

Smart India Hackathon Internal Round Winner	Oct 2025
Role - Leader	
2nd Position Mini Project Competition	Feb 2025
Role - Leader	
Top 5 Finalist NAAC Project Competition	May 2024
Role - Project Architect	

CERTIFICATIONS

SAP Certified - ABAP Backend Developer	May 2026 - May 2027
Issued by SAP	

EXTRACURRICULAR

Marketing Team Leader

- Directed the marketing team for college events, planning and executing promotional strategies across social media, on-campus outreach, and design collateral to enhance student participation and visibility.
- Managed end-to-end event logistics, coordinating cross-team communication and ensuring smooth, on-time delivery for multiple college events.
